- 4. Try to re-implement the solution from memory or with minimal reference.**
- 5. Experiment with variations of the problem to test your understanding.**

Focus on Understanding, Not Just Answers:

The goal is to develop your

problem-solving skills, not just to get the correct answer for a specific problem. Ask yourself: "Why does this solution work? Could it be improved? How would I apply this method to a different problem?"

Integrate with MATLAB

Documentation:

When a manual mentions a specific MATLAB function (e.g., `eig`, `fft`, `ode45`), take the time to look up that function in the official MATLAB documentation. This provides a deeper understanding of its capabilities, options, and

limitations.

Collaborate and Discuss:

Discuss the problems and solutions with peers or instructors. Explaining concepts to others is a powerful way to solidify your own understanding and gain new perspectives.
