

How to draw a shark

Unleashing the Oceanic Beast: A Columnist's Journey to Drawing a Shark The ocean, a realm of mystery and wonder, teems with creatures both majestic and terrifying. Among them, the shark, a pinnacle of predatory elegance, often elicits a primal response. Its powerful form, sharp teeth, and graceful movements inspire awe and fear in equal measure. Today, I embark on a journey, not to conquer the deep, but to capture its essence on paper. My quest: learning how to draw a shark. This isn't just about lines and shapes; it's about understanding the anatomy, capturing the motion, and ultimately, finding beauty in the brutal. The shark, a creature of incredible adaptations, presents a unique challenge for the aspiring artist. Its streamlined body, powerful tail, and intimidating rows of teeth require careful observation and precise depiction. But before we dive into the specifics, let's acknowledge the underlying joy of creation. Drawing, in its purest form, is a dialogue between the mind and hand, a conversation where imagination shapes reality. And the shark? It's a masterclass in form and function, a perfect subject for this exercise.

Understanding Shark Anatomy: The Blueprint for a Powerful Form

Basic Body Shape: Streamlining for Efficiency

A shark's body is an embodiment of hydrodynamic efficiency. Its streamlined shape, tapering from thick head to the powerful tail, minimizes resistance as it cuts through the water. Capturing this essence is crucial. We're not aiming for a realistic anatomical textbook; instead, we want a streamlined, elegant form. Referencing various shark species is key here. A Great White will have a different shape than a Hammerhead. Drawing simple shapes initially—ovals, triangles, cylinders—will help to translate these forms onto paper. Observe the curvature, the subtle angles, and how these contribute to the overall movement.

Fin Placement and Function: More Than Just Appendages

Shark fins aren't just decorations; they are vital components for propulsion, steering, and stability. The pectoral fins, positioned near the head, provide stability and maneuvering ability. The dorsal and caudal fins, or tail, are responsible for thrust and direction.

Understanding the placement and relative size of each fin will bring the drawing to life. A poorly placed fin will undermine the credibility of the image.

Tooth Deconstructing the Predatory Machine

The shark's teeth, often the most visually striking feature, are a vital part of its predatory arsenal. Drawing them requires careful attention to the shape, size, and placement. The number of teeth in a row, their arrangement, and how they interlock are crucial elements to convey the shark's predatory nature. A single, poorly drawn tooth can ruin the overall effect.

Chart: Shark Anatomy Key Elements

| Feature | Description | Importance in Drawing | ||| | Body Shape | Streamlined, tapered from head to tail | Essential for form and movement | | Fins (Pectoral) | Stability, maneuvering | Convey directionality | | Fins (Dorsal/Caudal) | Thrust, direction, balance | Crucial for momentum | | Teeth | Multiple rows, varied sizes, interlocking | Predatory aspect, detail |

Drawing Techniques: From Sketch

to Masterpiece

The Importance of Observation: Mimicking Nature

Before sketching, observe your subject thoroughly. Analyze the position, movement, and details of the shark. Sketching from real-life images is invaluable, allowing you to see the nuances and subtleties. Using reference photos or videos can be crucial for accuracy.

Building the Form: Layering and Refinement

Start with a simple outline of the body, incorporating the fins. This helps with perspective. Then, gradually add details and refine the shape. This layered approach allows you to build upon a foundation, correcting errors as you proceed.

Adding Texture and Detail: Bringing the Shark to Life

Sharpen the outlines of the fins and tail. Notice the subtle texture of the skin and add shading for depth and form. Experiment with different shading techniques, like cross-hatching or blending, to bring out the muscle and form. Use a variety of lines and tones for a lifelike appearance.

Benefits of Learning to Draw a Shark

And guess what? It's not as intimidating as you might think!

In this comprehensive guide, we'll break down the process of drawing a shark into simple, manageable steps. We'll cover everything from basic shapes to adding those crucial details that make your shark leap off the page. So, grab your pencils, paper, and maybe a glass of something refreshing to set the mood, and let's dive in!

Why Draw a Shark?

Beyond the sheer coolness factor, drawing sharks offers a unique opportunity to explore anatomy, form, and movement. They are masters of hydrodynamic design, and understanding their shapes can improve your drawing

skills across the board. Plus, with the growing awareness of shark conservation, creating art that celebrates these incredible creatures can be a powerful way to connect with and advocate for them.

Getting Started: Essential Tools and Basic Shapes

Before we start sketching, let's gather our supplies. You don't need fancy professional equipment to draw a shark. In fact, a few basic items will do the trick:

1. **Pencils:** A standard HB pencil is perfect for sketching. If you want to add shading, consider a 2B or 4B for darker tones.
2. **Paper:** Any drawing paper will work. Even printer paper can be a great starting point.
3. **Eraser:** A good quality eraser will be your best friend for correcting mistakes and creating highlights.
4. **Sharpener:** Keep your pencils sharp for clean lines.

Now, let's talk about the foundation of any drawing: basic shapes. When we look at a shark, we can simplify its complex form into a few fundamental geometric shapes. This is the secret to making any subject, including sharks, approachable.

Breaking Down the Shark Body

Most sharks can be broken down into a few key components:

1. **The Torso:** This is the main body of the shark. Think of it as a large, elongated oval or a slightly flattened teardrop shape. The wider end will be the head, and it tapers towards the tail.
2. **The Head:** While part of the torso, it's helpful to think of the head as a distinct area. For many sharks, it's a rounded or slightly pointed cone shape.
3. **The Tail (Caudal Fin):** This is the powerful engine of the shark. It's typically a crescent or crescent-moon shape, with a longer upper lobe for most species.
4. **Fins:** These are crucial for identification and balance. We have the dorsal fin (on the back), pectoral fins (on the sides), pelvic fins (underneath, towards the rear), and the anal fin (underneath, near the tail).

For our initial drawing, let's focus on a classic shark silhouette, perhaps a Great White or a Mako. These have a streamlined, torpedo-like body, which makes the oval or teardrop shape a great starting point.

Step-by-Step: Drawing a Shark

Let's get our hands dirty and start sketching. Remember, this is a process, and your first lines don't have to be perfect. We're building the drawing layer by layer.

Step 1: The Basic Outline

Start by lightly sketching a large, elongated oval for the main body. Don't press too hard; these are just guide lines. Imagine the shark swimming from left to right. The wider end of the oval will be the head, and the narrower end will lead to the tail.

Now, attach a slightly flattened crescent shape to the narrower end of the oval for the tail fin. For most sharks, the upper lobe of the tail is longer than the lower lobe, so draw it accordingly.

Next, let's add the fins. Lightly sketch a triangular shape on the top of the body for the dorsal fin. Think about its placement – it's usually more towards the front of the shark than the middle. Add two large, wing-like pectoral fins on the sides, extending outwards from just behind the head area. These are important for steering.

Finally, add the pelvic and anal fins. These are generally smaller and located on the underside of the shark, towards the rear. Keep these light for now.

Step 2: Refining the Body Shape

Now that we have our basic structure, let's start to refine the curves and make them more organic and shark-like. Look at your oval. Sharks aren't perfectly symmetrical. The underside is usually flatter than the top. Gently curve the bottom line of your oval inwards and the top line

outwards to create a more dynamic, muscular shape.

Connect the head area to the torso more smoothly. Think about the sleekness of a shark's body. The lines should flow. You can also start to refine the shape of the tail fin, making the curves more pronounced.

For the head, you can start to give it a more pointed or rounded snout, depending on the type of shark you're aiming for. If you're drawing a Great White, a somewhat blunt, conical snout is characteristic. For a Mako, it might be more pointed.

Step 3: Adding the Fins and Details

Let's flesh out those fins. The dorsal fin isn't just a plain triangle; it often has a gentle curve to its leading edge and a slightly sharper trailing edge. The pectoral fins are broad and somewhat rigid, used for lift and steering. Give them a subtle curve as well.

Now for the crucial details that bring your shark to life:

1. **The Eye:** Sharks have small, dark eyes. Place it a bit forward on the head, giving it a watchful gaze.
2. **The Gills:** Most sharks have five to seven gill slits located just behind the head. These are simple, curved lines.
3. **The Mouth:** This is where the drama happens! Sharks have a distinctive underslung jaw. Sketch a curved line for the mouth. If you want to show teeth, you can add

small triangles along the jawline. For a more menacing look, you can draw the mouth slightly open.

4. **Nostrils:** Sharks have a pair of nostrils on their snout. These are usually small, slit-like openings.

Step 4: Erasing Guidelines and Defining Lines

Once you're happy with the placement of all your elements, it's time to go over your drawing with firmer lines. Use your eraser to gently rub away the initial construction lines that you no longer need. This will help to define the shark's shape and make it stand out.

Trace over your best lines with your pencil, making them darker and more confident. Pay attention to the flow of the body and the sharp edges of the fins.

Adding Depth and Realism: Shading and Texture

A flat drawing is good, but a shaded drawing is even better! Shading adds volume, dimension, and realism to your artwork. Sharks are typically darker on their dorsal (top) side and lighter on their ventral (bottom) side – this is called countershading and helps them camouflage in the ocean.

Shading Techniques for Sharks

Let's start by establishing a light source. Imagine the light is coming from above and slightly to the side. This will help you decide where to place your shadows.

1. **Dorsal Side:** Apply light to medium shading on the top of the shark's body. Use smooth, even strokes. You can use the side of your pencil lead for broader areas.
2. **Ventral Side:** Keep the underside of the shark lighter. You can even use your eraser to lift some graphite and create highlights.
3. **Fins:** Shade the fins as well, paying attention to how light hits them. The leading edges might be slightly darker, and the trailing edges might catch more light.
4. **Mouth and Eyes:** The inside of the mouth and the eye should be very dark to create depth.

Don't be afraid to experiment with different shading techniques. You can use hatching (parallel lines), cross-hatching (overlapping lines), or smooth blending. For a watery feel, you can lightly smudge the shading with your finger or a blending stump.

Adding Texture and Details

Sharks have smooth, leathery skin, not scales like most fish. You can suggest this texture by using subtle variations in your shading. For areas like the gills or the inside of the mouth, you can use slightly darker and more

textured lines.

If you're drawing a shark with visible teeth, make them sharp and triangular. You can add a slight sheen to them with a quick highlight from your eraser.

Variations: Drawing Different Types of Sharks

The beauty of drawing is that you can capture the diversity of these amazing creatures. Once you've mastered the basic shark shape, you can start exploring different species:

1. **Hammerhead Shark:** The most distinctive feature is, of course, the hammer-shaped head. Simply broaden the front of your shark's head into a T-shape, with the eyes at the ends.
2. **Tiger Shark:** Known for its stripes, which are more prominent in younger sharks. You can add these curved, dark lines along the sides of your drawn shark.
3. **Whale Shark:** The gentle giant. These are massive and have a distinctive spotted pattern. While their basic shape is still torpedo-like, their head is much broader and flatter, with a huge mouth.
4. **Mako Shark:** Sleek, fast, and streamlined. Focus on sharp, pointed features and a very aerodynamic body.

Researching the specific anatomy of the shark you want to draw will greatly improve its accuracy and realism. Look at

reference photos! Reference images are your best friend when learning to draw.

Common Mistakes and How to Avoid Them

Even experienced artists make mistakes, and that's perfectly okay! Here are a few common pitfalls when drawing sharks and how to navigate them:

1. **Overly Simplistic Shapes:** While basic shapes are a starting point, don't leave your shark looking like a cartoon blob. Refine the curves and add those essential fins.
2. **Incorrect Fin Placement:** Fins have specific locations on a shark's body. Double-check your reference images to ensure they're in the right spot.
3. **Flat Shading:** If your shark looks two-dimensional, you likely need to work on your shading. Think about where the light would hit and where shadows would fall.
4. **Ignoring Anatomy:** While artistic license is great, understanding the basic anatomy of a shark will make your drawing much more believable.

Conclusion: Keep Practicing, Keep Drawing!

Learning how to draw a shark is a rewarding process that

involves understanding basic shapes, refining lines, and adding details that bring the creature to life. Don't get discouraged if your first attempts aren't perfect. The key to improving your drawing skills, just like with any art form, is consistent practice. Keep sketching, keep experimenting, and most importantly, keep having fun!

The ocean is full of incredible shark species, each with its own unique charm and characteristics. By following these steps and continuing to practice, you'll soon be able to draw a wide variety of these magnificent marine animals with confidence. So, go forth and create your own underwater masterpieces!

Drawing a shark is more than a simple exercise in sketching fins and scales—it's an opportunity to capture the raw power and timeless elegance of one of the ocean's most iconic predators. Whether you're an aspiring artist or a seasoned illustrator, understanding the anatomy and style of a shark enables you to create compelling, accurate, and visually striking representations. This guide explores the essential elements of shark drawing, offering insights into technique, perspective, and creative application.

Understanding Shark Anatomy for

Accurate Artistry To draw a shark convincingly, it's essential to study its distinctive features. Unlike fish, sharks possess a streamlined body built for speed, with a pronounced dorsal fin, curved tail, and sharp, pointed snout. Their skin texture varies by species—some have smooth, glossy surfaces, while others display prominent dermal denticles that create a rough, tooth-like pattern. The placement and shape of the pectoral fins, gill slits along the sides, and the arrangement of teeth—often sharply serrated—must align with

real anatomy to maintain authenticity. Observing reference images from multiple angles helps build a holistic understanding, allowing artists to render movement and proportion with confidence.

Mastering Composition and Perspective When composing a shark drawing, perspective plays a crucial role in conveying depth and realism. A three-quarter view is often most effective, as it showcases both the sleek body and the sharp dorsal fin extending above the water, emphasizing motion and

presence. Balancing dynamic angles with accurate anatomy prevents the shark from appearing stiff or misproportioned. Consider how light interacts with the curved body—shadows along the sides and highlights along the back enhance dimensionality. By integrating these elements thoughtfully, artists can transform a flat sketch into a vivid, lifelike depiction that draws viewers into the ocean's depths.

Applications and Benefits of Drawing Sharks Beyond artistic expression, drawing sharks

serves practical and educational purposes. Detailed illustrations support marine biology research, helping scientists communicate findings visually. Educational materials benefit from clear, accurate shark depictions that engage learners and promote awareness of these vital apex predators. For artists, mastering shark anatomy improves overall understanding of form, texture, and movement—skills that transfer across marine and wildlife illustration. Additionally, the process nurtures patience and observational skills, qualities

that enrich any creative practice.

Enhancing Your Craft with Modern Tools and Trends Today's artists can elevate their shark drawings by integrating digital tools and contemporary styles. Digital drawing tablets allow for precise control over line weight and shading, mimicking traditional textures while enabling easy revisions. Meanwhile, dynamic, stylized interpretations—featuring bold outlines, vibrant color palettes, or abstract forms—offer fresh ways to present sharks, appealing to broader audiences. Incorporating

environmental elements like coral reefs, schools of fish, or underwater light rays adds context and storytelling depth, transforming a single creature into a scene rich with oceanic life.

Looking Ahead: The Future of Shark Illustration As interest in marine conservation grows, the demand for compelling visual narratives around sharks continues to rise. Future shark art will likely emphasize realism grounded in scientific accuracy, paired with emotive storytelling that highlights vulnerability and resilience. Emerging technologies

such as augmented reality and 3D modeling offer new platforms for interactive shark exhibits, deepening public engagement. For artists, staying curious and adaptable—whether experimenting with new styles, embracing digital innovation, or contributing to educational outreach—ensures their work remains relevant, impactful, and inspiring in an ever-evolving creative landscape.

Mastering the Art of Drawing Sharks: A Comprehensive Guide

for Beginners and Beyond

The ocean's apex predator, the shark, has captivated human imagination for centuries. From its sleek, powerful silhouette to its formidable reputation, the shark is a subject that begs to be immortalized on paper. Whether you're a budding artist seeking to capture the raw power of a Great White or a seasoned illustrator looking to refine your marine wildlife sketches, this detailed, analytical guide will walk you through the essential steps of drawing a shark. We'll break down the process, explore different species, and equip you

with the knowledge to create a truly compelling shark illustration.

Why Draw Sharks? The Enduring Fascination with These Marine Marvels

Sharks are more than just fish; they are icons of the wild. Their streamlined bodies, rows of razor-sharp teeth, and mysterious presence have inspired countless stories, films, and artworks.

Drawing a shark allows you to connect with these incredible creatures on an artistic level, understanding their anatomy and the grace with which they navigate their aquatic environment. Beyond artistic

appreciation, understanding how to draw a shark can be a valuable skill for marine biologists, animators, game developers, and anyone with an interest in wildlife illustration.

Understanding Shark Anatomy: The Foundation of a Realistic Drawing

Before you even pick up a pencil, a basic understanding of shark anatomy is crucial. While the diversity of shark species is vast, certain core anatomical features are common.

The Torpedo-Shaped Body: The

Essence of Speed and Power

The most defining characteristic of most sharks is their fusiform, or torpedo-like, body shape. This aerodynamic design is perfectly adapted for efficient movement through water. Imagine a flattened oval or a slightly elongated teardrop. This will be the fundamental shape around which you'll build your shark.

Fins: The Control Surfaces of the Ocean

Sharks possess a variety of fins, each with a specific function: *
Dorsal Fin: This is the iconic fin

that often breaks the surface. It's typically located midway down the shark's back and acts as a stabilizer, preventing rolling. Some sharks have one, while others, like the Hammerhead, have multiple. * Pectoral Fins: These are the large, wing-like fins on either side of the shark's body, just behind the gills. They provide lift and steering, much like airplane wings. * Pelvic Fins: Located on the underside of the shark, further back than the pectoral fins. They also aid in stability and maneuvering. * Anal Fin: Found on the underside of the shark, behind the pelvic fins.

Its function is primarily stabilization. * Caudal Fin (Tail Fin): This powerful fin propels the shark through the water. Most shark tails are heterocercal, meaning the upper lobe is larger than the lower lobe, providing both thrust and lift.

The Head and Mouth: The Business End

The head of a shark is typically pointed, tapering towards the snout. The mouth is usually located on the underside, though some species, like the Hammerhead, have mouths positioned more anteriorly. Pay

attention to the placement of the eyes, nostrils, and gill slits, as these details add authenticity.

Skin and Texture: The Importance of Detail

Shark skin is not smooth; it's covered in dermal denticles, tiny tooth-like scales that reduce drag and provide protection. This texture can be suggested through shading and line work, giving your drawing a more realistic feel.

Step-by-Step Guide: Drawing a Basic Shark Silhouette

Let's begin with a simple, yet

effective, approach to drawing a shark. This method focuses on building the form with basic shapes.

Step 1: The Primary Body Shape

Start by drawing a slightly elongated oval or a torpedo shape. This will be the main body of your shark. Don't worry about perfection at this stage; it's just a guide.

Step 2: Adding the Head and Tail

To one end of your oval, attach a more pointed shape for the head. To the other end, add a broader, tapering shape that will become

the tail fin. Think of a slightly flattened, curved triangle for the tail.

Step 3: Sketching the Fins

Now, begin to sketch in the fins. *

Dorsal Fin: Draw a triangular or slightly curved fin on the top of the body, about a third of the way back from the head. *

Pectoral Fins: Sketch in two wing-like fins extending from the sides of the body, just behind the gill area.

They should have a slight curve. *

Pelvic and Anal Fins: Draw smaller, simpler fins on the underside of the shark.

Step 4: Refining the Outline and Adding Details

Once your basic shapes are in place, start to refine the outline. Smooth out the transitions between the body, head, and tail. Add the gill slits behind the head, the eye, and the nostril. For the mouth, you can draw a simple curved line on the underside of the head.

Step 5: Erasing Guidelines and Adding Final Touches

Carefully erase any overlapping construction lines. Now you have a solid outline of a shark! You can

add further details like shading to give it volume and life.

Drawing Different Shark Species: Expanding Your Repertoire

The beauty of drawing lies in its ability to represent variety. Here are a few popular shark species and how their distinctive features can be incorporated:

The Great White Shark: The King of the Ocean

The Great White is perhaps the most iconic shark. Its imposing size and powerful build are key. When drawing a Great White, emphasize its robust torso and

broad, powerful tail. The snout is relatively blunt, and the dorsal fin is prominent and often slightly falcate (curved).

The Hammerhead Shark: The Architect of Evolution

The Hammerhead's defining feature is its unique cephalofoil - the hammer-shaped head. When drawing a Hammerhead, ensure the width and shape of the hammer are proportionate to the body. The eyes are located at the ends of the hammer, giving it a wide field of vision. The body is generally more slender than a Great White.

The Mako Shark: The Speed Demon

Mako sharks are built for speed. Their bodies are more streamlined and torpedo-shaped than many other species. The tail is deeply forked, and the fins are more pointed and swept back. The snout is also more pointed.

The Tiger Shark: The Striped Hunter

Tiger sharks are known for the distinctive dark stripes or spots on their bodies, especially when young. When drawing a Tiger Shark, remember its broad, blunt

snout and powerful build. The stripes are crucial for identification.

Adding Depth and Realism: Techniques for Better Drawings

Moving beyond basic outlines, these techniques will elevate your shark drawings.

Shading: Bringing Your Shark to Life

Shading is essential for creating volume and form. * Light Source: Determine where your light source is coming from. This will dictate where your highlights and shadows fall. * Gradual Tones:

Use a range of pencil pressures or blending techniques to create smooth transitions between light and dark areas. The underside of the shark is often lighter than the top. * Reflections: Add subtle highlights on the shark's skin to suggest a wet surface.

Line Weight: Creating Dimension

Varying the thickness of your lines can add depth. Thicker lines can be used for outlines or areas in shadow, while thinner lines can suggest details or areas catching the light.

Texture: The Dermal Denticle Detail

To suggest the rough texture of shark skin, you can use a stippling technique (small dots) or very fine, short lines. This is especially effective on areas that would be in shadow.

Movement and Pose: Capturing Dynamic Action

A static shark can be impressive, but a shark in motion is truly breathtaking. * Flowing Lines: Think about the natural curves of a swimming shark. Use flowing lines to convey its movement

through the water. * Tail Action:
The tail is the primary engine.
Show it in a powerful stroke,
curving to one side. * Fin
Placement: Fins will adjust based
on the shark's movement.
Pectoral fins might be angled for
steering or slightly tucked in.

Tools of the Trade: What You'll Need
to Draw Sharks

*** Pencils: A range of graphite**
pencils (e.g., HB for sketching, 2B
and 4B for shading) is ideal. *
Paper: Smooth drawing paper or
sketchpad is suitable. * Eraser: A
good quality kneaded eraser and
a standard eraser are essential
for corrections. * Reference

Images: High-quality photographs or illustrations of different shark species are invaluable for accuracy and inspiration.

Common Mistakes to Avoid When Drawing Sharks

*** Ignoring Anatomy: Drawing without understanding basic shark proportions leads to unrealistic results. * Flatness: Failing to use shading to create volume makes your shark appear two-dimensional. * Stiff Poses: A shark that looks like it's frozen in place lacks the dynamism of its real-life counterparts. ***

Overlooking Details: Small elements like gill slits, eyes, and

fin shapes contribute significantly to realism.

Conclusion: Embark on Your Artistic Ocean Adventure

Drawing a shark is a rewarding journey that blends artistic skill with scientific observation. By understanding the fundamental anatomy, practicing basic shapes, and employing shading and line techniques, you can create compelling and realistic shark illustrations. Whether you're drawn to the power of the Great White, the uniqueness of the Hammerhead, or the sleekness of the Mako, the world of shark art is vast and exciting. So, grab your

pencils, embrace the challenge, and dive into the thrilling experience of drawing these magnificent marine predators. With practice and patience, your shark drawings will evolve from simple sketches to powerful portrayals of these incredible ocean inhabitants.

Questions & Answers About how to draw a shark

No	Question	Answer
1	What are the basic shapes to start drawing a shark?	Begin with a long, oval or torpedo shape for the body. Add a triangle for the head, and then a curved line extending from the body for the tail fin (caudal fin).
2	How can I make my shark drawing look more dynamic and realistic?	Incorporate subtle curves and bends into the body to suggest movement. Add pectoral fins that are slightly swept back, and a dorsal fin that is often curved. Consider shading to give it form and depth.
3	What's the easiest way to draw a shark's mouth and teeth?	For the mouth, draw a curved line that extends from beneath the snout. For teeth, draw small, sharp triangles along the jawline. You can vary their size and position for a more natural look.

4	What are the key features that distinguish different shark species for drawing?	Focus on the dorsal fin shape (e.g., tall and triangular for a Great White, curved for a Tiger Shark), the snout shape (pointed or blunt), and the gill slits. The tail fin's shape can also be a giveaway.
5	How do I draw the iconic dorsal fin of a shark?	The classic dorsal fin is a triangular shape, often with a slightly curved leading edge and a more pointed trailing edge. Position it towards the front of the shark's body, slightly behind the head.
6	What are some common mistakes beginners make when drawing sharks, and how can I avoid them?	Common mistakes include making the body too stiff, the fins too small or flat, and the teeth too uniform. Avoid these by looking at reference photos, focusing on organic curves, and varying the size and shape of features.
